

H-ITT's SoftClick® preliminary product brief

SoftClick® is an easy-to-use browser-based application that allows students to send answers using virtually any device that is web enabled, such as laptops, cell phones and PDAs. **SoftClick®** works with standard web browsers like Internet Explorer, Firefox, and Safari.

You can now give your students the option to purchase either a H-ITT remote or a **SoftClick®** subscription!

The **SoftClick®** application supports all of the Modes in the H-ITT CRS V2 software including multiple choice, multi-digit alpha/numeric, fill in the blank, paper based testing modes, homework mode, as well as roster building functions. **SoftClick®** can be used in a classroom alongside H-ITT's IR and/or RF remotes.

SoftClick® can also be used by faculty to collect student's responses from remote locations like off-site classrooms, homes or offices. Instructors enable **SoftClick®** for their class with one click in the Options settings of the Acquisition program.

No Hardware required! If your entire class uses **SoftClick®** then all you need to do is install H-ITT CRS V2 software (it's FREE) and you are ready to go!

Students purchase a **SoftClick®** license key at H-ITT's online store, then simply log into the **SoftClick®** webpage and enter a session ID (assigned by the instructor), select the question type (like Multiple Choice, Multi-digit, test, homework etc), then answer questions just as they would with a real H-ITT remote.

Responses received via **SoftClick®** are compiled with responses from H-ITT remotes to display results histogram, and the data is always saved for analysis, grading and reporting with the Analyzer application.

The **SoftClick®** user's pallet is designed for small screen applications typically used on cell phones and the like. Below are some examples of answer pallets:
