

TX1000 two-way IR remote (also called a “clicker”, “transmitter”, “handheld”, “Pad” and/or other industry adopted name).

USED WITH: All H-ITT’s IR Base receivers.

General description:

The TX1000 is a handheld IR (Infrared) transceiver that is used by students or audience members to respond to questions posed by the instructor. They are available in three neon colors: orange, yellow, and green and have 13 buttons on them for up to 10 response choices A-J or 0-9 and forward and reverse keys for indexing through test questions, and a special function receive key. When a response key is pressed, the light on the remote turns red, and when the response is successfully received by the base unit the light on the remote will turn green.

Approximate dimensions: 5.2” x 1.3” x 1”

Each remote has a unique ID number printed on a label underneath the battery. This unique ID number is used by H-ITT’s software to identify the remote and associate it with a user through H-ITT’s software rosters. The TX1000 operates on one standard 9-volt battery (not included) and has a 60 foot typical range.

TX3000 ID number

The remotes come packaged in a box with instructions that indicates the color of the remote. Each remote is individually packaged and includes an instruction sheet. Also provided in 50 count cartons.
