iCue™

#TX3100 two-way RF remote

Used with: H-ITT's RF iCue Base

iCue™ is H-ITT's value based RF audience response system. The iCue response units are built for reliability at industry leading value. iCue remotes work with H-ITT's software and base receivers to capture responses in large or small classrooms and are capable of facilitating thousands of participants. iCue provides for the ability to receive ten unique responses ranging from true/false to multiple choice and validates for each participant that their response has been received. The iCue is the industry's fastest real-time response device.

	iCue TX3100 Instruction Manual	**The iCue is H-ITT's "slim line clicker" that is favored by users because of its full set of features, compact size, rugged design, and low cost.** **Dimensions: 4.75"x 2"x 0.5"** **Weight: 2.5 oz** **Features:** • **True/false and multiple choice** • **In-class paper-based test mode - Supports self-paced individual testing** • **Red /green indicator light – Confirms receipt of responses** • **31 RF channels – Allows for multiple classroom setups without interference** • **200 feet signal range** • **Requires two AAA batteries that will provide approximately one year of battery life with normal use**

*Each remote has a unique ID number printed on the back, and also on a label underneath the battery door. This unique ID number is identified by H-ITT's software and can easily be associated to a user through H-ITT's roster building software.
